Blue = Download
Orange = Upload
Green = New /changed (not synced with database)
Bold Italics - Suggested removal

T.M. - added tables to track categories and departments

RPC = 13 Digits:
00 - Dept
00 - Cat
000000 - Item
000 - SubType

This also makes the difference between RPC and UPC easy to determine and allow for the use of UPC for bulk candies

Does PO need both EmployeeID and CreatedBy?

POCreatedBy only, that is the employee however and so is also the fk

NOTE 2: POTerms is the payment 'type' and is on the po not statically per vendor

Make PO more like invoice

OrderType tells us whether the ID belongs to PO or Invoice
